

Universal Light Fitting

The Universal Light Fitting allows our Powerspot lighting units to be fitted to most displays, from banners to pop-ups to linear systems.

features & benefits

- Can be used to fit lights to most banner stands, pop-ups, linear and gantry systems
- Strong and durable moulded fixing
- Supplied with screwdriver

Banner Fixing

Panel Fixing

Pop-Up Fixing

Linear Fixing

(Alternative light fixings for linear systems are codes LNB and US.Linear)

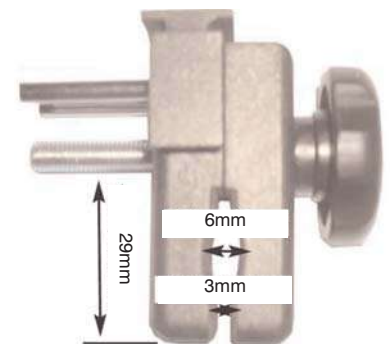

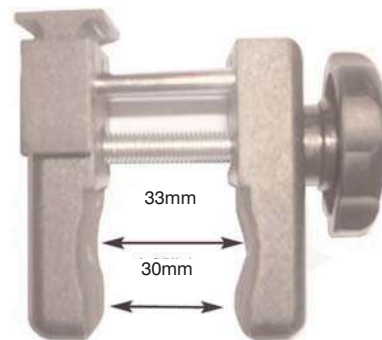

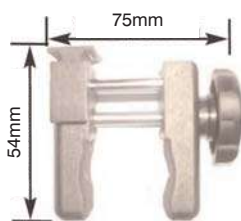

LNB - panel fixing

US.Linear
Linear channel

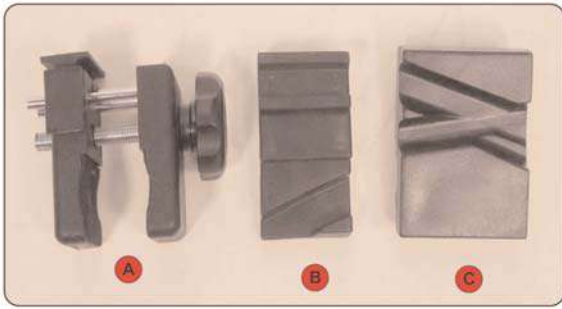

hardware specifications

Clamp dimensions:
75mm x 54mm x 37.5mm

Assembly Instructions

Kit includes: (A) Clamp, (B) Pop-up fitting, (C) Universal/Spyder fitting

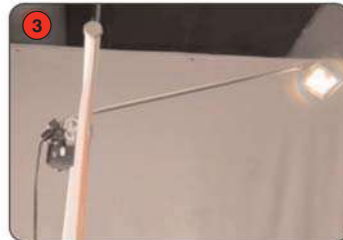

Banner Fitting

Slide the clamp onto the light fitting. Then, loosen the clamp.

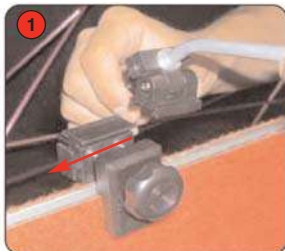

Place the clamp on the post and hold it there while tightening.

The finished light should look like this.

Panel Fitting

Fit clamp to panel, then slide in light fitting to secure.

Gantry Fitting

The light can be mounted on a gantry system using the same method used for panels.

Pop-Up Fitting

Another way to mount our light is on a pop-up. For this you need the pop-up light clip.

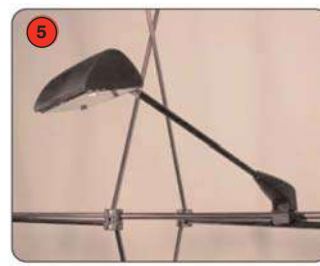

Slide it on with the clip hanging off the back of the light.

Slide it on the right side between one of the cross sections of the pop-up.

Make sure that it is under the back pole and over the front pole.

This is what it should look like.

Linear Fitting

Simply slide the clamp fitting onto the light and fix onto the linear beam, tightening the knob to secure.
