

# SHELL GRAPHIC

- 1** Apply the long strip of hook and loop to the top of your ShellGraphic panel, gently peel and separate the strip to reveal which part is the hook or loop, apply the softer fabric loop part to the rear of your panel.
- 2** Evenly distribute your tabs in a similar way as per the diagram to the rear of the shell scheme wall, applying the hook part to the wall so the softer fabric part of the tab sticks to your panel, keeping the same type of tab consistent on your panel. *(This is handy so you only need new hook tabs next time you use ShellGraphic at another venue).*
- 3** With your graphic rolled up align the graphic to the top edge of the shell scheme. Once in the correct position peel back the release tape and apply the panel to the top of the shell scheme.
- 4** Fix the graphic to the smaller tabs removing the release tape as you roll out the graphic from the top to the bottom of the shell scheme.
