

# SHELL GRAPHIC

You can also watch these instructions in the video link below.

- 1 Gently peel and separate the long strip to reveal which part is the **hook** or **loop**. Stick the softer fabric loop part to the rear of your graphic panel.
- 2 Evenly distribute your tabs in a similar way as per the diagram to the shell scheme wall, applying the **hook** part to the wall so the softer fabric **loop** part of the tab sticks to your panel, keeping the same type of tab consistent on your panel. *(This is handy so you only need new hook tabs next time you use ShellGraphic at another venue).*
- 3 With your graphic rolled up align the graphic to the top edge of the shell scheme. Once in the correct position peel back the release tape and apply the graphic panel to the top of the shell scheme.
- 4 Fix the graphic to the smaller tabs removing the release tapes as you roll out the graphic from the top to the bottom of the shell scheme.
- 5 Use the extra small dots supplied where necessary.
